Continuation of 2. NOTE: Claim 128 as amended contains new limitations requiring additional reconsideration. Finally, the status of the claims is unclear since the presented claims show claims 10 and 60 as canceled yet the status of the claims (i.e., page 23, first paragraph) shows all the claims pending (including claims 10 and 60)...

Continuation of 5. does NOT place the application in condition for allowance because: In response to applicant's arguments: As to claims 1 and 51 (and potentially claim 128), see at least page 23, lines 1-16 of Puuskari with respect to an RSVP signaling information and/or PDP context (in relation to page 7, middle paragraph with respect to PDP context and an IP address). In addition, examiner notes a reasonable but broad interpretation of flow identifier to include an IP address (i.e., applicant argues limitations not recited in the claims by arguing that a flow identifier is not an IP address). However, examiner places emphasis on application's own specification at page 25, first paragraph where a flow can include an IP address (i.e., a destination or a source address). As such, see page 6, lines 9-11 and page 7, lines 7-8 of Puuskari. As to claims 101 and 111, examiner notes a reasonable but broad interpretation of "status of a wireless network". In particular, such attributes as service precedence, delay class, reliability, and mean and peak bit rates disclosed at page 2, lines 33-35 of Puuskari describe the status of a wireless network (i.e., these parameters disclose the "operation or flow parameters" of a network with respect to applicant's specification at the bottom on page 18). Not clearly recited in the claims is representing the performance or network load of a wireless network which is what applicant may be arguing. As to claims 120 and 123 see similar reasoning for claim 1...
